# Liquid Depth Volume Chart

The chart below shows the relationship between tank volume, the float setting elevation, and the liquid depth. The float setting (FS) is measured from the top of the tank to the liquid surface; liquid depth (LD) is measured from the liquid surface to the floor of the tank.

## Example:

If a 1000-gallon tank is filled to a liquid depth of 49 inches, the liquid volume is 1011 gallons. The float setting is 15" and the volume per inch at that setting is 20 gallons.
